

AutoProgression

User Guide

Installation, quick start, controls, and everyday use
Version 2.0.0 | Tashi

AutoProgression automates repeatable account progression in Idle Slayer: normal Ascension, skills, normal equipment, temporary craftables, materials, eggs, quest maintenance, and the two paid 500x bonuses.

This guide is for players who want to install the mod and use it safely. For every setting and behavior, see the Complete Manual.

What AutoProgression Does

- Performs normal Ascension at a configurable pending-SP percentage and can optionally Ultra Ascend at 24 Astral Keys.
- Can spend remaining Slayer Points through the Ascension-tree Buy All action.
- Buys available shop skills and levels unlocked normal equipment.
- Maintains supported timed craftables and refreshes Rage with Rage Pills.
- Uses Scrap and Dragon Scale overflow; Shards Necklace has no duration cap, while Dragon Scale duration effects respect the configured maximum.
- Optionally opens Dragon and Simurgh Eggs in the background while preserving reserves.
- Claims completed Daily and Weekly Quests and regenerates exhausted sets.
- Filters selected newly generated Daily Quests and selects the 180,000-kill Rage Weekly Quest.
- Can reset the normal Portal cooldown and keep quest rerolls available.
- Can purchase the two 500x Jewels of Soul bonuses.
- Can claim and resend Minion missions and automatically prestige eligible Minions at their maximum level.

AutoProgression does not travel between dimensions, controls the character, or fights quest targets.

Installation

Idle Slayer Mod Manager (recommended)

- 1 Install and initialize Idle Slayer Mod Manager.
- 2 Install Idle Slayer Mods Core.
- 3 Import the AutoProgression ZIP without extracting it.
- 4 Enable AutoProgression and start the game.

Manual installation

Place `AutoProgression.dll` in:

```
%LOCALAPPDATA%\IdleSlayerModManager\ModLoader\Mods\
```

Starting and Stopping

Press T in a normal running dimension to enable AutoProgression. Press T again to disable it.

The runtime starts disabled each time it is created. The T toggle does not change saved settings. It enables or pauses the configured automation groups together.

Periodic AutoProgression behavior requires the global T toggle, including unlimited Daily and Weekly reroll availability. Blocking the two vertical Random Box magnet upgrades is a persistent protection and remains active while T automation is off.

Recommended First Setup

Before pressing T, review these settings:

- 1 Enable Use Paid 500x Bonuses only if you want automatic Jewel spending.
- 2 Enable Craftables and Buy Missing With Jewels only if craftables may buy materials.
- 3 Enable egg opening if desired, then set the Dragon and Simurgh Egg reserves you want to keep.
- 4 Review the normal Ascension threshold and post-Ascension Buy All setting.
- 5 Confirm the Scrap and Dragon Scale overflow thresholds.

Then enter a normal Runner or Rage dimension and press T.

Important Currency Warning

The following settings can spend Jewels of Soul:

- Use Paid 500x Bonuses
- Buy Missing With Jewels

Material purchases use the configured Purchase Percent. Specialization and Key Manifest never buy Scrap, Simurgh Feathers, or Dragon Scales. Other missing materials follow the global Jewel setting.

Normal Ascension

The default threshold is 50%: pending Slayer Points must reach the configured percentage of lifetime Slayer Points. Checks occur every 5 minutes by default and once immediately after enabling AutoProgression.

Normal automatic Ascension can repeatedly invoke the Ascension-tree Buy All action afterward until two stable rounds spend no more points.

Automatic Ultra Ascension Enabled is disabled by default. When explicitly enabled, Ultra Ascension takes priority over normal automatic Ascension once the game's native Ultra Ascension skill and prerequisite rules are active and GetAstralKeys() reports at least 24 keys. The threshold is fixed. This is a major progression reset and should be enabled only after understanding it.

Craftables

The Craftables > Enabled setting is the master switch for every craftable option and any material purchase requested by those craftables. The detailed settings below it are evaluated only while this switch is enabled.

Ascendant Badge Boost is armed whenever its one-use effect is available and Dragon Scales are strictly above 50% of the current unlocked capacity. This threshold is fixed. Dragon Scales are never bought; other missing recipe materials follow Buy Missing With Jewels.

Timed items begin refilling at 3 minutes and stop at 6 minutes by default. Rage Pills use their own minimum interval.

Scrap and Dragon Scale overflow items are triggered by inventory percentage. Shards Necklace has no duration cap and continues until Scrap falls below its configured threshold (97% by default). Dragon Scale duration items still stop at the shared maximum-duration setting.

Quest-assist craftables use separate 5-minute cooldowns by default:

- Specialization: normal Goblin and Bonus Stage quests
- Key Manifest: normal Chest Hunt quests

Every Specialization trigger requires Dragon Scales to be strictly above 50% of the current unlocked capacity, including the normal quest-triggered path.

Specialization also has a resource-overflow trigger independent from quests: it is used when Scrap is above 80%, provided the shared Dragon Scale reserve condition and its normal crafting conditions allow it. This path neither reads nor starts the quest-assist cooldown; the game's native one-use state controls repetition.

Key Manifest has a separate Simurgh Feather overflow trigger. When Feathers are strictly above Key Manifest Feather Overflow Amount (1000 by default), it is crafted whenever its native one-use state allows. This path is independent from Quest Assist Craftables Enabled and its cooldown, but still requires the Craftables master switch and global T automation. Set the amount to 0 to disable only this overflow path; normal quest-triggered Key Manifest use remains.

Daily and Weekly Quests do not trigger these two items. Specialization also preserves a fixed Scrap reserve: it is not crafted when its cost would leave Scrap below 50% of the player's current unlocked storage capacity. This safety threshold is intentionally not configurable. Key Manifest uses Simurgh Feathers and is unaffected by the Scrap reserve.

Manual Armory Box Opening

In the craftables screen, highlight one of the five Armory boxes, the Dragon Egg, or the Simurgh Egg and press the configured Select Box Key (B by default). Press Open Boxes Key (N by default) to open up to Boxes Per Press selected boxes or eggs (10 by default) without the slow modal animation. The two keys must differ. Normal crafting costs and reward rolls are retained. Armory boxes stop when materials or Armory slots run out; eggs stop when their material runs out. This feature is independent from T.

Casino Crawler Eyes

Enable Casino Crawler Eyes > Enabled, open the Village Casino Crawler Eye purchase screen, and press M to purchase the configured amount. The default is 1,000 Eyes per press. Purchases run as sequential native 10-eye transactions and stop safely when Jewels of Soul are insufficient or the screen is closed. This manual feature is independent from T and can spend substantial premium currency.

Silver Boxes

Silver Box enhancement is active independently from T. Auto Claim Reward checks once per second and claims an available reward through the game's normal reward method. The game's native storage limit and Silver Box consumption behavior are unchanged.

Quest Maintenance

The Quests > Enabled setting is the master switch for this entire group. When it is disabled, claiming, generation, filtering, rerolls, and Portal cooldown automation are all inactive regardless of their individual settings.

AutoProgression can claim completed Daily and Weekly Quests, generate another set when one type is exhausted, and keep rerolls available.

After a new Weekly set is generated, the mod can reroll one generated slot until the 180,000 Rage Mode kill objective appears. Existing extra Weekly slots are preserved.

After a new Daily set is generated, the mod can reroll selected inconvenient objectives. Existing Daily Quests and later manual rerolls do not trigger the filter.

The filtered objectives include material collection and crafting temporary craftables, along with the other event and minigame objectives documented in the complete quest-maintenance guide.

Eggs

Set `Egg Opening > Enabled = true` to open eggs in the background without the normal animation. This feature is disabled by default:

- Simurgh Eggs open while above their reserve.
- Dragon Eggs open while above their reserve and Dragon Scale storage is not full.

One item action is allowed per second, preventing a large synchronous burst.

Minions

`Auto Claim` and `Send` claims completed missions and sends each unlocked Minion again when its Slayer Point cost is lower than the available balance.

`Automatic Maximum-Level Prestige` acts only when the game reports that Minion Prestige is unlocked. A standing Minion must have a level above 1 and a maximum level of at least 70. The service raises that Minion to its maximum level for the prestige action.

When this setting is enabled, manually triggered prestige uses the selected Minion's maximum level even when its maximum level is below 70 and while the global T automation toggle is off. The 70 maximum-level threshold applies only to automatic prestige. Disabling the setting restores the game's normal manual prestige behavior.

With both settings enabled, the order is claim, prestige when eligible, then send. With only automatic prestige enabled, manually claiming a mission leaves the Minion standing by for the next automatic prestige check.

Why the Mod Sometimes Waits

Automation runs only after the normal central gameplay scene is stable. It pauses through unsupported scenes, Ascension reconstruction, and unavailable game objects. A two-second Ascension lock clears cached IL2CPP references before other services resume.

Configuration File

The first launch creates:

```
%LOCALAPPDATA%\IdleSlayerModManager\ModLoader\UserData\AutoProgression.cfg
```

Edit it while the game is closed, then restart the game. See the Configuration Reference for every option.

Quick Troubleshooting

Pressing T does not immediately act

Enter a normal Runner or Rage dimension and wait for the three-second stable screen guard. Unsupported scenes and transitions intentionally pause actions.

A craftable is not being made

Check its feature switch, unlock state, material requirements, lower refill or inventory threshold, and maximum duration. If Jewel purchases are disabled, missing ordinary materials must be collected manually.

Automatic Ascension does not happen

Check the threshold calculation, 15-minute default interval, current pending Slayer Points, and whether the main gameplay scene is stable.

A Daily or Weekly was not rerolled

Generated-set filters run only for a new set created while AutoProgression is active. Manual rerolls and tasks that already existed when T was enabled are not reprocessed.

For more help, see Troubleshooting and Logging.

Full Automation Suite

- AutoProgression handles account growth and repeatable maintenance.
- AutoAdventurer handles active gameplay, quest objectives, travel, Rage, and movement abilities.
- AutoClimber handles Ascending Heights routes, rewards, and compatible quest enemies.

Each mod works independently and complements the others.
