

AutoProgression

User Guide

Installation, quick start, controls, and everyday use
Version 2.0.0 | Tashi

AutoProgression is the account-growth core of Tashi's Full Automation Suite for Idle Slayer. It automates Ascension, shop upgrades, normal equipment, Minions, craftables, materials, quest maintenance, eggs, Silver Box rewards, and selected premium-currency actions.

This mod is deliberately modular. It does not control the character during normal running, choose combat targets, travel for quests, or play every minigame. Those responsibilities belong to companion modules listed in Full Automation Suite.

Read This Before Enabling the Mod

AutoProgression contains both ordinary quality-of-life automation and options that can strongly alter game balance.

The following features can spend Jewels of Soul:

- Use Paid 500x Bonuses
- Craftables > Buy Missing With Jewels
- Manual Casino Crawler Eyes > Enabled

The first two automatic Jewel-spending paths are disabled by default. The manual Casino tool is also disabled by default. Do not enable any of them until you understand the cost and have reviewed the generated configuration.

The following features can also have major progression consequences:

- automatic Ultra Ascension
- unlimited Daily and Weekly Quest rerolls
- repeated Daily and Weekly Quest generation
- Portal cooldown removal
- maximum-level Minion prestige
- automatic egg and material consumption

Automatic Ultra Ascension, automatic Minion prestige, automatic egg opening, paid 500x bonuses, and the Craftables master switch are disabled by default.

Requirements and Tested Versions

Component	Tested version	Purpose
Idle Slayer	Current mod-compatible PC release	Base game
Idle Slayer Mod Manager	Current release	Installation and launch
MelonLoader	0.7.3 Open-Beta	Mod runtime
Idle Slayer Mods Core	1.3.2	Required shared library
AutoProgression	2.0.0	This mod

Later compatible releases may also work, but the versions above describe the author's tested environment.

Installation

Mod Manager installation

- 1 Install and initialize Idle Slayer Mod Manager.

- 2 Install Idle Slayer Mods Core 1.3.2 or a compatible later version.
- 3 Import AutoProgression.zip without extracting it.
- 4 Enable AutoProgression in the manager.
- 5 Start the game once to generate the configuration file.
- 6 Close the game and review the configuration before enabling automation.

Manual installation

Copy AutoProgression.dll to:

```
%LOCALAPPDATA%\IdleSlayerModManager\ModLoader\Mods\
```

The configuration file is generated at:

```
%LOCALAPPDATA%\IdleSlayerModManager\ModLoader\UserData\AutoProgression.cfg
```

Edit the configuration while the game is closed, then restart the game.

Global Control

Key	Default action
T (configurable)	Enable or disable periodic AutoProgression automation
B	Select the highlighted Armory box, Dragon Egg, or Simurgh Egg
N	Open the selected box or egg in the background
M	Start one configured Village Casino Crawler Eye bulk purchase

The runtime starts disabled. Enter a normal Runner or Rage dimension and press the configured toggle key (T by default). Change it with `General > Toggle Key`. The central gameplay screen must remain stable for approximately three seconds before periodic actions begin.

Turning the main toggle off pauses periodic automation without changing saved settings. The following intentionally remain independent from it:

- blocking the two unwanted vertical Random Box magnet upgrades
- manual Armory box and egg opening
- manual Crawler Eye bulk purchasing
- automatic Silver Box reward claiming
- the manual maximum-level Minion prestige enhancement, when enabled

Each independent feature is labeled in the configuration.

Recommended First Setup

For a conservative first run:

- 1 Leave `Use Paid 500x Bonuses = false`.
- 2 Leave `Craftables > Enabled = false`.
- 3 Leave `Buy Missing With Jewels = false`.
- 4 Leave automatic Ultra Ascension disabled.
- 5 Leave automatic maximum-level Minion prestige disabled.

- 6 Leave automatic egg opening disabled.
- 7 Review the normal Ascension threshold.
- 8 Decide whether quest regeneration, unlimited rerolls, Daily filtering, and Portal cooldown removal match the way you want to play.
- 9 Enter a normal dimension and press T.

Enable resource-consuming groups one at a time after confirming their descriptions and observing the log.

Ascension

Automatic normal Ascension

Normal Ascension compares pending Slayer Points with lifetime Slayer Points. The default threshold is 50%. Enabling the runtime performs one immediate check; later checks occur every five minutes.

When `Buy Skills After Automatic Ascension` is enabled, the mod repeatedly uses the Ascension Skill Tree `Buy All` action until no more Slayer Points can be spent. This follow-up is triggered only by an automatic normal Ascension; manual Ascension is unaffected.

Automatic Ultra Ascension

Automatic Ultra Ascension is disabled by default. When explicitly enabled, it takes priority over normal Ascension only when:

- the game's native Ultra Ascension requirements are satisfied;
- the native Ultra Ascension action is available; and
- the current Ultra Ascension would grant at least 24 Astral Keys.

The 24-key threshold is fixed. Ultra Ascension is a major reset, so enable this option only after understanding its consequences.

All other automation pauses behind a two-second Ascension transaction lock while game objects are rebuilt.

Shop Skills and Normal Equipment

`Purchases > Skills` Enabled buys all currently affordable and eligible shop skills every five seconds.

`Purchases > Equipment` Enabled buys only unlocked normal shop equipment. It starts with the newest unlocked item, purchases that item until it no longer meets the current bulk threshold, and then moves toward older equipment. Skills continue to be checked while the equipment buyer is sleeping.

`Disable Vertical Magnet Upgrades` permanently blocks the two Random Box vertical magnet upgrades from automatic and manual purchase. This protection does not depend on T.

Minions

`Auto Claim` and `Send` claims completed unlocked Minion missions and sends standing Minions again when their Slayer Point cost is affordable.

`Automatic Maximum-Level Prestige` is disabled by default:

- automatic prestige requires T;
- the Prestige system must be unlocked;
- a standing Minion must have a maximum level of at least 70;
- eligible automatic prestige uses that Minion's maximum level;

- when both Minion options are enabled, the order is claim, prestige, send.

When this setting is enabled, a manually initiated prestige also uses the selected Minion's maximum level, including Minions below the automatic 70-level threshold. This manual enhancement remains active while T is off.

Craftables and Materials

Craftables > Enabled is the master switch for every automatic craftable service. When it is false, no automatic craftable is used and no material is purchased for a craftable.

Jewel material purchasing

Buy Missing With Jewels allows enabled craftable services to purchase eligible missing materials at the selected Material Purchase Percent. Supported purchase sizes are 25%, 50%, and 100%.

This option never purchases:

- Scrap
- Simurgh Feathers
- Dragon Scales

Every Jewel purchase is shown in the normal user log.

Timed craftables

The shared Timed Items Target Minutes default is 6 minutes. Refilling begins automatically at half the target, so the default behavior refills from 3 minutes toward 6 minutes.

Supported timed items include:

- Whetstone
- Alternate Dimension Staff
- Bidimensional Staff
- Deathwave Scepter

Deathwave Scepter also preserves its configured Simurgh Feather reserve. Rage Pill checks separately and may refresh Rage even while Rage Mode is already active.

Scrap and Dragon Scale overflow

Shards Necklace consumes excess Scrap when storage reaches its configured percentage. Its default threshold is 97%. It intentionally ignores the shared duration target and continues until Scrap falls below the threshold.

The Dragon Scale overflow group contains:

- Random Box Staff
- Necklace of Collectables
- CpS Compass
- Souls Compass

The group begins a cycle above its configured Dragon Scale percentage and respects the shared duration target.

Ascendant Badge Boost

Ascendant Badge Boost Enabled is an independent switch and is disabled by default. When enabled, the mod arms the one-use Armory boost only when:

- Craftables and T automation are active;
- Dragon Scale storage is strictly above the fixed 50% requirement;
- the item is unlocked and its native one-use state is available; and
- all required materials are available or eligible ordinary materials can be purchased under Buy Missing With Jewels.

Dragon Scales are never purchased. After the boost is consumed, it may be crafted again when the native state becomes available.

Specialization and Key Manifest

Quest Assist Craftables Enabled controls both items:

- Specialization supports active normal Goblin and Bonus Stage quests.
- Key Manifest supports active normal Chest Hunt quests.
- Daily and Weekly Quests do not trigger either item.

Both items share Quest Assist Feather Threshold Amount:

- 0 disables both items completely;
- above 0, current Simurgh Feathers must be strictly greater than the value;
- crafting must leave at least the configured amount;
- Simurgh Feathers are never purchased.

Specialization may also run without a quest when Scrap is above 80% and Dragon Scales are above 50%. It preserves at least 50% Scrap and pauses this overflow path while an active quest requires normal, Silver, or Golden Random Boxes. Special Random Boxes do not block it because they start Bonus Stages.

Key Manifest also uses the shared Feather value as an independent overflow trigger. When Feathers are above the threshold and the native one-use state is available, it may be crafted without a matching quest.

Quest-triggered Specialization and Key Manifest each have their own internal five-minute cooldown. Resource-overflow triggers rely on native one-use availability instead.

Quest Maintenance

Quests > Enabled is the master switch for claiming, regeneration, rerolls, generated-set filtering, and Portal cooldown maintenance.

AutoProgression can:

- claim completed Daily and Weekly Quests;
- generate another Daily or Weekly set after that type is exhausted;
- keep Daily and Weekly rerolls available;
- reset the normal Portal cooldown;
- reroll a newly generated Weekly slot until the 180,000 Rage Mode kill quest appears;
- filter selected inconvenient objectives from newly generated Daily sets.

Weekly preference and Daily filtering run only after a newly generated set. They do not continuously rewrite existing quests and do not react to later manual rerolls.

The optional Daily filter removes:

- Goblin kills
- material collection
- temporary-craftable crafting
- Chest Hunt chests
- normal and Silver Random Boxes
- normal Boost uses
- Rage Mode uses
- Bonus Stage entry, full-completion, and section objectives
- Ascending Heights completion
- Grapple Run completion

Rage Mode kill quests and Wind Dash kill quests are retained. Completed quests waiting to be claimed are never rerolled.

AutoProgression maintains quest data only. AutoAdventurer performs supported quest objectives and dimension travel.

Eggs

Automatic egg opening is disabled by default and does not play the slow native opening animation.

- Dragon Eggs open only while above their reserve and while Dragon Scale storage is not full.
- Simurgh Eggs open only while above their reserve.
- Craftable actions have priority over egg opening.
- Background item actions are limited to avoid a large synchronous burst.

Default reserves are 300 Dragon Eggs and 10 Simurgh Eggs.

Paid 500x Bonuses

Use `Paid 500x Bonuses` is disabled by default and directly spends Jewels of Soul. When enabled, it maintains both Souls and CpS 500x bonuses.

The service uses a timer for normal operation, then reads the real remaining effect duration when the timer expires. This avoids constant polling and remains safe when game-speed effects alter cooldown timing.

Silver Boxes

`Auto Claim Reward` automatically claims an available Silver Box reward after entering the game. It is independent from T. The native Silver Box storage limit and consumption rules are not changed.

Manual Armory Box and Egg Opening

Open the Armory craftables screen and highlight one of the five Armory boxes, a Dragon Egg, or a Simurgh Egg.

- 1 Press `Select Box` Key (B by default).
- 2 Press `Open Boxes` Key (N by default).

- 3 Up to Boxes Per Press items are opened in the background.

The default amount is 10. Normal material costs and reward rolls remain in effect. Opening stops when materials, eggs, or free Armory slots run out. This manual tool is independent from T.

Manual Casino Crawler Eye Purchasing

This tool is disabled by default and directly spends Jewels of Soul.

- 1 Enable Manual Casino Crawler Eyes > Enabled.
- 2 Open the Village Casino Crawler Eye purchase screen.
- 3 Press Purchase Key (M by default).

The default request is 1,000 Eyes. Purchases are performed as sequential native 10-eye transactions and stop safely if the screen closes, Jewels become insufficient, or a safety timeout occurs.

Runtime Safety

AutoProgression operates only after the central Runner or Rage scene is stable. It pauses through unsupported scenes, menus that replace central gameplay, Portals, minigames, and Ascension reconstruction.

Safety behavior includes:

- a three-second central-screen stabilization gate;
- a two-second Ascension transaction lock;
- cached IL2CPP object resets across relevant boundaries;
- at most one ordinary item action per second;
- safe waiting when objects, recipes, or native actions are unavailable;
- delayed generated-quest processing so native quest data can stabilize;
- concise user errors and detailed stack traces only in Debug Mode.

Logging

Normal user logs show:

- mod load and T state
- normal and Ultra Ascension starts
- Jewel purchases
- Minion prestige
- Silver Box claims
- manual bulk actions
- completed Daily and Weekly filtering results
- warnings and errors

Debug Mode adds subsystem diagnostics, object resolution, timers, state transitions, and aggregated activity summaries. It is disabled by default.

Logs are stored under:

```
%LOCALAPPDATA%\IdleSlayerModManager\ModLoader\MelonLoader\Logs\
```

Full Automation Suite

The current first-party suite is:

Mod	Version	Responsibility
AutoProgression	2.0.0	Account progression, Ascension, purchases, quests, Minions, craftables, materials, eggs, and menu maintenance
AutoAdventurer	2.0.0	Normal running, automatic jumping, combat abilities, Rage, quest selection, dimension travel, event safety, and bosses
AutoClimber	1.2.1	Ascending Heights route planning, recovery, quest enemies, rewards, retry, and background play
AutoBonusRunner	1.0.1	Bonus Stage route execution, jumping, sphere requirements, Spirit Boost support, start-slider handling, and optional native retry

AutoAdventurer 2.0 includes automatic attacking. Do not run AutoBonusRunner alongside Auto Jump or Bonus Stage Completer because they can compete for Bonus Stage input. AutoBonusRunner's Skip mode provides the same fast-completion behavior as Bonus Stage Completer.

Each first-party module can be used independently. Together, they divide account maintenance, normal gameplay, Ascending Heights, and Bonus Stages into separate safety domains.

Optional Third-Party Companion Mods

The author's currently tested supplemental stack is:

Mod	Tested version	Responsibility
GrappleRunAutocompleter	1.1.0	Grapple Run completion
Perfect Chest Hunter	2.0.0	Chest Hunt automation
Armory Manager	1.2.2	Automatic Armory cleanup and dismantling
Idle Slayer Mods Core	1.3.2	Shared dependency used by the suite and several community mods

These are not all hard dependencies of AutoProgression. Install only the components you want and follow each author's requirements and permissions.

Troubleshooting

Pressing T does not immediately act

Enter a normal Runner or Rage dimension and wait for the central screen to stabilize. Unsupported scenes and transitions intentionally pause automation.

A craftable is not being made

Check, in order:

- 1 T is active.

- 2 Craftables > Enabled is true.
- 3 The individual item switch is enabled.
- 4 The item is unlocked and its native state allows use.
- 5 Its duration or resource threshold is satisfied.
- 6 Protected materials are available.
- 7 Buy Missing With Jewels is enabled if ordinary materials must be bought.

For Ascendant Badge Boost, Dragon Scales must be strictly above 50%. With a capacity of 249, 124 is only 49.8%; at least 125 is required.

Automatic Ascension does not happen

Check pending versus lifetime Slayer Points, the configured percentage, the five-minute internal interval, and whether central gameplay is stable. Enabling T performs one immediate check.

A Daily or Weekly Quest was not rerolled

Generated-set filters run only for a set generated while AutoProgression is active. Existing sets and manual rerolls are not reprocessed. Completed quests are intentionally skipped.

Eggs do not open

The count must be above its reserve. Dragon Eggs also stop while Dragon Scale storage is full. Eggs yield to higher-priority craftable actions.

Reporting a problem

Include:

- the latest MelonLoader log;
- the scene and open panel;
- the action immediately before the problem;
- your relevant configuration entries;
- the versions of all installed automation mods.

Confirm that the stack trace names AutoProgression before attributing a loader or another mod's error to this project.

Support and Source

- Source and issue tracking: [Tashi's IdleSlayerMods](#)
- Optional development support: [PayPal](#)

This is an unofficial community mod. Idle Slayer and its assets belong to their respective owners.
